

Ekornes Pacemaker information

Potential magnetic interference with medical devices

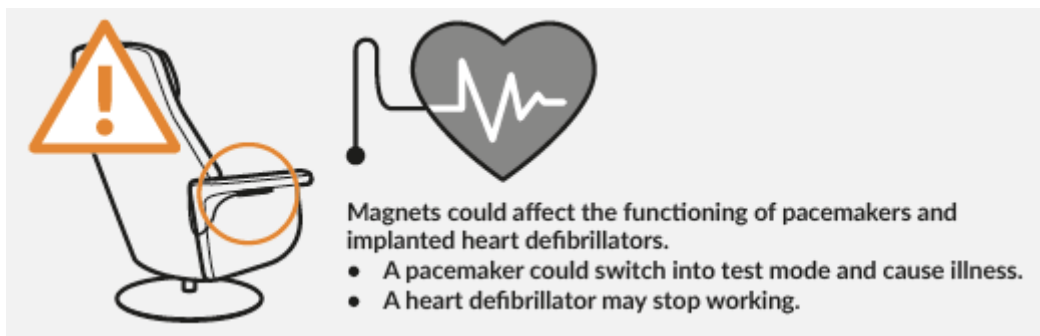

There are several consumer devices on the market today that contains magnets or components that emit electromagnetic fields.

Magnetic interference

Under certain conditions, magnets and electromagnetic fields might interfere with medical devices. For example, implanted pacemakers and defibrillators might contain sensors that respond to magnets and radios when in close contact.

Electromagnetic interference

Please keep a safe distance of at least 15 cm/ 6 inches from the magnets on your Stressless product.

Stressless products that contains magnets

Magnetic mount for remote control (left armrest seen from front)
